10. Visitor passes
11. Broadcasts and the official channel
12. The resident mobile app
13. Inviting residents and cloud sync
14. Accounting and reports
15. Backup, settings, plan and support

1. About this manual

This manual covers the RWA HQ desktop app — the office/manager side that runs your society. Residents use the separate free RWA HQ mobile app, which has its own short manual.

RWA HQ keeps your data on your own machine and syncs only the resident-facing parts to the cloud so the mobile app and resident portal work. It records and reports; it does not file any statutory returns for you.

2. What RWA HQ does

In one place RWA HQ handles: your members and units (flats or plots), maintenance billing and dues, receipts and collections, notices, complaints, visitor passes, broadcasts to residents, and full society accounting with reports.

Because the accounting is built in, every bill, receipt and due is a real ledger entry — so your balances, statements and reports are always correct, not just a separate list.

3. Installing and first launch

Download RWA HQ from the website and run the installer. Open the app and create your society.

A Quick Setup wizard runs automatically. On the “Your society” page set the society name, your state code, GSTIN (if any), the books year, and — importantly — whether your units are Flats or Plots. That single choice labels units throughout the app (the “Flats” screen becomes “Plots”, and so on), so set it before you add units.

You can re-run the wizard any time from the gear “Setup” button in the status bar, or the tile menu under Settings > Quick Setup.

4. Finding your way around

Like Accounts HQ, RWA HQ offers two navigation styles, chosen in Settings: a sidebar list on the left, or a full-screen tile menu opened with the “Menu” button.

The status bar at the bottom always shows the Menu button, the sidebar toggle, the Setup (gear) button, and your AI Credits balance.

5. Society Settings

Society Settings holds your full profile: name, address, contact details, logo, GSTIN/PAN, the Flats/Plots unit type and area unit, and your UPI ID and payment links for collecting dues.

Update it any time — the app’s labels and the details printed on bills, receipts and notices follow what you set here.

6. Units: Flats or Plots

The Flats (or Plots) screen is your register of units. Each unit has an owner/resident and its own maintenance ledger, so dues and receipts for that unit roll straight into the accounts.

Add, edit and view units here; the screen's name and labels match the Flats/Plots choice you made in setup.

7. Members — owners and residents

The Members screen lists the people in your society — owners and residents — with their contact details and their access to the resident mobile app. Keep this current so notices, bills and app access reach the right people.

8. Maintenance billing and dues

Raise maintenance bills against units, record receipts as residents pay, and track who is in arrears. Residents can pay through your UPI ID — the money goes straight to the society's account; RWA HQ never holds it.

Because billing is backed by real accounting, you get proper ledgers, aging and statements for dues — see Reports.

9. Notices and complaints

Notices — post announcements to residents. They appear in the resident app and can be sent over WhatsApp.

Complaints — residents raise issues from the app; you track each one and close it when resolved.

10. Visitor passes

A visitor pass is generated with a code (by a resident from the app, or by the office). The gate verifies the code when the visitor arrives, the resident gets a WhatsApp confirmation, and the office keeps a copy. There is no approval bottleneck — it is built to be quick at the gate.

11. Broadcasts and the official channel

Broadcasts let the society — or an approved vendor — send a message to everyone through an official channel, with consent and billing handled. This is separate from resident-to-resident chat, which happens only in the mobile app.

12. The resident mobile app

Residents install the free RWA HQ app on their phone. It gives them notices and complaints, one-to-one and group chat with neighbours (without sharing phone numbers) plus calls, visitor passes, and their maintenance dues with UPI payment.

The app updates itself, so residents do not reinstall for new features. The app has its own short manual.

13. Inviting residents and cloud sync

Invite residents with a join link and your society's HQ-ID; a light soft-KYC step confirms who they are. The desktop app is the source of truth, and resident-facing data syncs to the cloud so the app and portal stay up to date.

14. Accounting and reports

RWA HQ includes the complete Accounts HQ engine — vouchers, GST, the financial statements, day book, ledgers, reconciliation, period locks and backups all work exactly as in Accounts HQ. RWA Reports add society-specific views such as dues and collections.

For the accounting screens in full detail, see the Accounts HQ user manual.

15. Backup, settings, plan and support

Back up your society file regularly from Backup & Restore. Settings covers theme, date format and navigation, plus the society extras (billing rules, facility approvals, and WhatsApp/broadcast setup). License & Plan shows your current plan.

RWA HQ checks for updates on launch and tells you when a new version is available. For help, use Feedback in the app or email info@ai-consultants.in.
